

CWIFT 2022 User Notes

1. The Census Bureau did not release official ACS 1-year estimates for 2020 due to data collection and quality concerns resulting from the COVID-19 pandemic. As a result, the 2022 CWIFT index relied on the three most recent years of ACS 1-year estimates available at the time of production (2019, 2021, 2022).
2. Connecticut's markets were redefined to match the State of Connecticut's nine Council of Government (COGs)/planning regions as county-equivalent geographic units. This follows the State of Connecticut's formal request to the Census Bureau to adopt the State's nine planning regions as county-equivalent geographic units for purposes of collecting, tabulating, and disseminating statistical data, replacing the eight counties which ceased to function as governmental and administrative entities in 1960.
3. Two market boundaries were redefined to maintain minimum market-level sample counts. In Nebraska, market 31033, consisting of Banner County, Cheyenne County, and Kimball County was combined with adjacent market 31157, consisting of Scotts Bluff County. The merged market was named market 31033. In North Dakota, market 38085, consisting of Adams County, Bowman County, Hettinger County, Sioux County, and Slope County was combined with adjacent market 38089, consisting of Stark County. The merged market was named 38085.
